

Sentinel-X | Forensic Infrastructure

Audit Protocol

1. Safety-First Architecture:

The audit is performed via a **Cross-Account Trust Relationship**. We do not require usernames, passwords, or root keys. You maintain 100% control of the access gate.

2. Non-Intrusive & Read-Only:

The attached CloudFormation template uses the AWS Managed Policy `ReadOnlyAccess`.

- **NO** data modification.
- **NO** service interruption.
- **NO** cost impact on deployment.

3. Instant Revocation:

You can terminate the audit session at any second by simply deleting the CloudFormation Stack. The "Audit Token" (ARN) will immediately become invalid.

4. Deliverable:

Once the handshake is complete, Sentinel-X will generate your **Real-Time Annual Waste Report** (The Bleeding Meter) within 5 minutes.
